

What good is the “right” treatment if the diagnosis is wrong?

Based on the medical cases reviewed by our physicians, **1 out of 3 diagnoses in the U.S. require correction or refinement.** And 75% of the reviewed treatment plans need modification. In fact, medical errors are a leading cause of injury and even death in our country.

Best Doctors is out to change that. We help ensure the right diagnosis and treatment by providing patients with access to world-class medical experts for second opinions, treatment guidance and more. Our services are offered nationwide as an employee benefit by companies like The Home Depot and many other Fortune 500 companies. Find out if *your* company offers Best Doctors and keep your health care on the right track.

 Best Doctors®

Helping patients get the right diagnosis *and* the right treatment.

Below are a few case studies where **Best Doctors** made an impact.

Marion was involved in a serious car accident and began experiencing headaches, neck pain and dizziness. Medical test results **revealed nothing**, yet her condition worsened. A Best Doctors specialist reviewed her case and **discovered an undetected brain injury**, as well as soft tissue injury and even a possible concussion. The expert provided a step-by-step plan to put Marion on the right course for treatment.

A lump on **Simon's** hand was **diagnosed as** a **noncancerous** ganglion cyst. Less than two weeks after surgery to remove it, the lump grew back, bigger than before. A Best Doctors specialist reviewed Simon's case and found Simon was **positive for a cancer called fibrous histiocytoma**. The specialist recommended further surgery and Simon avoided the consequences of a life-threatening situation.

Alex, a runner and mother of two, lived for years with a malfunctioning heart valve. She always took the necessary precautionary steps with her cardiologist to watch for any changes in symptoms, such as feelings of fatigue, fainting, and shortness of breath. Alex felt healthy, until one race in 2012, which she struggled to complete. **Something wasn't right**. She decided to have her case reviewed by a Best Doctors cardiology expert. The expert **recommended an immediate valve repair**, noting that Alex's condition had become severe and was endangering her heart. She had the surgery and is on the path to recovery, grateful for the services Best Doctors provided.
